WEIGHING IT RIGHT

Columbus, Ohio-based Mettler Toledo has added the IND429 to its line of industrial weighing terminals. The IND429

terminal carries multiple safety ratings and is suitable for use in harsh environmental conditions. The device is dust-tight and can be cleaned with high-pressure equipment. The IND429 also meets Good Manufacturing Practice (GMP) compliance standards. The IND429 was designed for use in hygienically sensitive areas. Its smooth surface and the materials used in its construction allow it to be cleaned easily and completely. It also works with a range of existing Mettler Toledo bench and floor platforms and offers a terminal that can interface with either an analogue scale or high precision (IDNet) scale.

NEW LINE OF LUBRICANTS

Calgary-based Imperial Oil Limited has a new complete line of food grade lubricants. The company received approvals from Agriculture and Agri-Food Canada (AAFC) for five lubricants in the most stringent category 'n' for incidental food contact. With almost 50 products now approved in all four AAFC categories, Imperial offers food and beverage companies the convenience of a single source for a complete range of lubricants. Imperial's approved food grade line now includes circulating, compressor, gear, hydraulic, process, protective, refrigeration and turbine oils. It also includes a complete line of industrial grease.
